- ✓ Lightweight construction

## VOMO Leichtbautechnik GmbH & Co KG

### Living the technology of lightweight constructions!

And that for quite a long time!

Since 2001 the core area of VOMO Leichtbautechnik's work includes the production and further processing of lightweight elements with a paper honeycomb core inside.

As a classic B2B company, VOMO sees itself as an extended workbench and supplier for

- Fair and Exhibition construction
- Museums
- Shopfitting
- Camper & Caravan interior
- Architects
- Libraries

and for YOU!

We support you as a partner with our products and solutions, the technical possibilities and our KNOW-HOW which has grown over years.

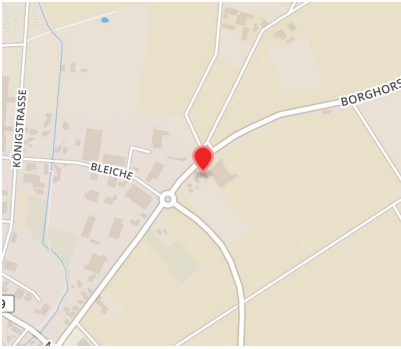

### Manufacturing that suits you!

Our standard product lines are already made with a focus to a wide range of applications. As diverse as the products are the industries and requirements in which they are used. While for the first the used adhesive is rather secondary it is essential for the second. While the one considers an easy installation to be important, the focus for the next is on the enormous weight savings.

No matter where YOUR focus is set – you'll find a VOMO solution

Get an impression of our product world and the specific solutions for your brand or industry!
