mezzo systems GmbH

For 20 years we have been designing and selling the mezzo system. And throughout this entire period we have particularly focused on implementing mobile communication concepts.

The mezzo system is based on following key guidelines:

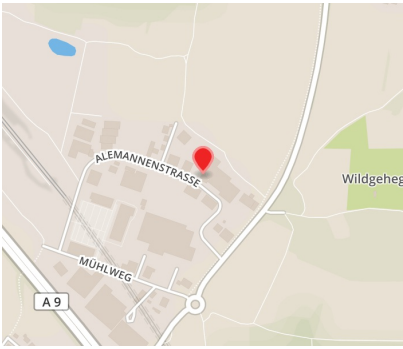

- **mezzo design:** Our concealed locking system offers you unlimited design possibilities
- **mezzo flexibility:** Our materials can be bent and surface-treated to suit your every need. **mezzo flexibility also means** short lead times and transparent pricing
- **mezzo efficiency:** With only a few designs we provide many solutions. Thanks to the filigree system and its low weight we also substantially reduce transportation and storage costs.
- But the greatest advantage of all is being able to assemble and dismantle structures quickly.

References

Our team can rely on the established international partner network and is please to support you with convincing solutions.

Application Areas

The architecture system made of aluminium profiles for trade shows, exhibitions and shop fitting.

25 Alemannenstrasse,
85095 Denkendorf,
