Irus-System

1990 marked the launching of the universal Irus clamp connectors with the company headquarters in Blumberg/Black Forest. Over the years the company has developed a wide variety of clamp connectors, e.g. cross connectors, angle connectors, wall connections and many more. The range of applications comprises not only exhibition stands, shop fitting, glass constructions but also the sectors advertising technology or museum installations.

Today, panel thicknesses of 3-5, 5-8, 10-13 and 13-16mm can be connected. Regardless of the material, connections for wood, glass, metal or rigid foam and composite panels are possible using steel or plastic clamping screws.

Irus-System has continued to make further developments. The current range comprises aluminium profiles and their accessories. The trick is that all clamp connectors from 3-5 and 5-8mm can be combined with the "Flexi-Long" aluminium profiles so that all panels, partitions and exhibition panels that are used for providing information can be realized.

The Irus-Flexi-Quick exhibition stand system is currently the latest further development of the Irus range of products. The Flexi-Quick is ideal for the light and effortless installation of an exhibition stand. Whether information or brochure stands, information and partition panels, poster stands, illuminated advertising etc., Irus-System is the perfect partner for designing your exhibition stand.
